### The Grand Dichotomy

	Reliability	Validity
What does it tell you?	The extent to which results can be reproduced under identical conditions.	The extent to which results truly measure what they are supposed to measure.
How is it assessed?	By checking consistency across time, observers, or parts of the test itself.	By checking correspondence to established theories and external criteria.
The Golden Rule	Reproducible results are not necessarily correct results.	Accurate results must fundamentally be reproducible.
